## Which pallet types do you use?

Pallet size, configuration, construction, and weight decide the conveyor type.

**Standard EUR pallets 800 mm x 1200 mm, 1000 mm x 1200 mm and 1200 mm x 1200 mm can be moved longways** i.e. with the 800 mm, 1000 mm or 1200 mm side leading – on standard pallet roller conveyors with roller pitch 178 mm.

**can be moved crossways** i.e. with the 1200 mm side leading – on pallet roller conveyors with narrow roller pitch, i.e. pitch 89 mm.

**400 mm x 600 mm pallets – so-called 1/4 pallets, and 600 mm x 800 mm pallets – so-called 1/2 pallets** can usually be moved on pallet conveyors with narrow roller pitch 89 mm, however there are bottom configurations that do not allow this – please consult SOCO SYSTEM for advice and further details.

**48" x 42" and 48" x 48" – GMA type pallets** can, in most cases, be moved with 48" side leading on conveyors with roller pitch 178 mm and with either side leading on conveyors with narrow roller pitch, i.e. 89 mm.

### Full base pallets

i.e. pallets with bottom boards in all 4 directions can easily be moved with either side leading on conveyors with roller pitch 178 mm.

## Chain or roller conveyor?

Chain conveyors are used where the bottom configuration of the pallets does not allow it to be moved on pallet roller conveyors.

Chain conveyors are often more suitable for 1/4 pallets.

## Which roller pitch to use?

Roller pitch – RP – is the distance between the roller centres.

RP 178 mm with roller diameter 80 mm is the most economical in terms of conveyor price, however, in certain cases, this requires guard or fence to meet industry requirements and regulations for personnel safety and security.

RP 89 mm allows most pallet configurations to be conveyed with either side leading.

## Driven or non driven?

SOCO SYSTEM does not recommend handling of loaded pallets on non-driven conveyors. The reason is that loads can easily become dislocated on the pallets, products can slide and fall off the pallets, causing product damage and personnel hazards.

# The pallet handling system

## A world of possibilities

Imagination is the only limitation to the number of possible applications of the pallet handling system.

To give an idea of the construction principles and the possibilities, the various components of a driven roller pallet conveyor are explained.

### Rollers

SOCO SYSTEM's rollers and chains have excellent wear and tear properties, and they are smooth-running components made from the best raw materials. Standard diameter is  $\varnothing$  80 mm.

### Side guides

Side guides are available for mounting in different heights. The side guides aid the pallets to maintain the correct direction.

### Side frames

The frames form the main structure of the conveyor and are designed for both function and harmony.

Frames come in different heights: 90 mm for mounting direct on the floor and 190 mm for additional heights.

### Gear motor

The sturdy and reliable standard gear motor is a 0.37 kW motor with a speed of 11.4 m/min. Other speeds are available on request.

The worm reduction gear is fixed to the conveyor frame.

### Supports

Are available for inside or outside mounting, for stationary attachment to floor, or to stand direct on the floor.

Supports are available in various heights.

### Couplings

Standard fittings makes it easy to connect themodules.

All couplings are easily and quickly mounted.

## Pallet roller conveyors

To be used where height needs to be low, for direct floor mounting, or integration with machines and other equipment

# Pallet roller conveyors – height 90

## Driven pallet roller conveyors

For floor mounting.

The max. length of a roller conveyor with one gear motor is 4.5 m with a max. payload of 1500 kg. All sections are supplied with coupling fittings.

Accessories pages 12-15.

### Specifications

**Frames:** Cold-bend angle profiles bolted to C-profile cross bars with supports.

**Surface treatment:** Electro galvanized steel with the exception of gear motor, chain, and roller axles. Rollers are electro galvanized with yellow cromating.

**Rollers:** Ø 80 mm electro galvanized steel tubes.

**Axle diameter:** Ø 17 mm.

**Bearings:** 6203 – 2RS.

**Roller fittings:** Rollers suspended between side frames by means of M10 axle.

**Payload:** Max. 1500 kg per conveyor and per gear motor.

**Standard heights:** The total height from floor to top of rollers is 90 mm. For heights 190 mm and higher, see pages 10 and 11.

**Chain drive for rollers:** Chains operate beneath roller surface. Chain drive is from roller to roller. ½" sprockets of hardened steel are integrated with the bearing of the roller.

## Guide rail

ITEM NO.	1303306000
----------	------------

State length in mm on the order.

## Side guides

To guide the pallets.

To order as complete side supports:

- State the required number of guide rail support units.
- State the required guide rail length in mm.

## Centre guides

For empty pallets of different sizes.

Are recommended to guide the centre part of the base of the pallet during the advancing.

Two guide rail supports are required for each unit of guide rail.

**Note:** Can be installed on pallet roller conveyors with RP 178 mm only.

### Guide rail support

ONE UNIT

ITEM NO. 465140210

### Guide rail

ITEM NO. 1303306000

State length in mm on the order.

## Pallet end stop

Prevent pallets from exceeding the conveyor.

Universal model for all heights.

### Pallet end stop

FOR CONVEYOR HEIGHTS 90 MM OR 190 MM

WIDTH	ITEM NO.

### Driven chain conveyors simplex chain

Chain conveyors are designed for pallets and other goods with a plane, solid base.

Chain conveyors are suitable for pallet accumulation.

Width 750 mm is designed for 800 mm x 1200 mm pallets, travelling with either side leading.

Width 950 mm is designed for 1000 mm x 1200 mm and 1200 mm x 1200 mm pallets

travelling with either side leading.

For heavy-loaded pallets, a conveyor with 3 chains is recommended. Please ask for further information.

#### Specifications

**Chains:** 3/4" pallet chain with straight side plates.

**Chain distance:**  
cc 700 mm for width 750.  
cc 900 mm for width 950.

**Payload:** Max. 1500 kg per conveyor and per motor.

**Standard height:**  
Supports available for standard heights from 225 mm to 650 mm – other heights on request.

**Gear motor:** 0.55 kW.  
Worm reduction gear mounted on crossbar between the frames.

**Speed:** 11.4 m per minute, 1500 kg with one gear motor. Other speeds available on request.

### Coupled sections simplex chain

HEIGHT 225 MM EXCL.  
SUPPORTS

WIDTH	LENGTH	ITEM NO.

	3000	462852400

All measurements in mm.

### Coupled sections

It is recommended to install supporting blocks between coupled sections.

Please see page 20.

Same specifications as for driven chain conveyor but without gear and motor.

### Driven chain conveyors duplex chain

Conveyor width 290 mm is designed for  $\frac{1}{2}$  and  $\frac{1}{4}$  pallets depending on base configuration.

Same specifications for chain, gear motor, and speed as for driven conveyors simplex chain.

#### Driven chain conveyors duplex chain

HEIGHT 225 MM EXCL. SUPPORTS

WIDTH	LENGTH	ITEM NO.

All measurements in mm.

Chain conveyor system for  $\frac{1}{4}$  plastic pallets. The system is equipped with pneumatic stops for precise positioning of pallets at Dansk Kaffe Kompagni in Denmark.

### Supports for external mounting

HEIGHT	ITEM NO.
250	442740250
350	442740350
500	442740500

Other heights available on request.  
All measurements in mm.

### Supports for chain conveyors

Different models and heights make it possible to achieve the optimum operation height.

Supports for **external** mounting offer high durability and stability and are also recommended for heavy-duty purposes.

Supports for **internal** mounting are recommended where space does not allow external mounting. Supports for internal mounting are not recommended for heights exceeding 350 mm.

### Supports for internal mounting

HEIGHT	ITEM NO.
250	442742250

Simplex chain conveyor system at Dansk Kaffe Kompagni, Denmark.

# Pallet rotary tables

## Rotary tables

The rotary table is used to change the direction of travel of pallets.

Fitted with roller conveyor – also available with chain conveyor on request. The turntable can rotate  $\pm 90^\circ$  and  $\pm 180^\circ$ .

## Specifications

### Standard height:

350 mm or 470 mm. Standard minimum height 310 mm. Other heights on request.

### Payload:

Max. 1500 kg.

### Rotation:

2.8 or 3.75 RPM.

### Gear motor:

0.25 kW.

Rotary table with conveyor of height 90 mm.

Rotary table with conveyor of height 190 mm.

## Three step order process:

Pallet conveyor height 190 mm.

### 1. Top part: Pallet conveyor with skirt

CONVEYOR WIDTH	HEIGHT 90 MM		HEIGHT 190 MM	
	RP 89 ITEM NO.	RP 178 ITEM NO.	RP 89 ITEM NO.	RP 178 ITEM NO.
970	482711111	482721111	482711121	482721121
1170	482712111	482722111	482712121	482722121
1370	482713111	482723111	482713121	482723121

All measurements in mm.

### Console for support rollers

ITEM NO. 483420xxx\*

xxx\* insert conveyor height in mm.

External support rollers are included to ensure smooth transition of pallets to and from the rotary table.

Consoles for support rollers must be ordered separately.

Please order consoles in required height. Support roller consoles are not height adjustable.

### 2. Middle part: Rotary table base with base structure

CONVEYOR WIDTH	BASE PLATE DIAMETER	ITEM NO.
970	1480	483391105
1170	1630	483392105
1370	1780	483393105

All measurements in mm.

### 3. Base part: Supports

OPERATING HEIGHT	PALLET CONVEYOR HEIGHT	SUPPORT HEIGHT	ITEM NO.
90 mm	190 mm		
350 mm	470 mm	260 mm	442733260

Adjustable  $\pm 20$  mm.  
Other heights on request.

### Rotary tables with safety cover

Version for operation outside safety zone.

Rotary table equipped with protection plates that covers top and side.

For further information, contact SOCO SYSTEM.

Close-up of top and side plates.

### Pallet transfer units

The transfer unit makes a 90° change of direction of pallet movement.

The 90° transfer unit is a chain conveyor which is raised and lowered automatically above roller height.

Can be fitted in all pallet conveyors where the height exceeds 350 mm.

#### Specifications

**Motors:** Two motors – one for up/down movement and one for chain movement.

**Chains:** 3/4" pallet chain with straight side plates.

**Chain distance:** 700 mm.

**Standard widths:** 970 mm, 1170 mm, and 1370 mm.

**Standard height:** 350 mm.

**Payload:** Max. 1500 kg per pallet.

**Transferspeed:** 11.4 m/min. (other speeds available).

#### Gear motor:

Chain conveyor 0.55 kW.  
Lifting unit 0.37 kW.

### Pallet transfer units

CONVEYOR WIDTH	ITEM NO. MOTOR RIGHT SIDE MOUNTED	ITEM NO. MOTOR LEFT SIDE MOUNTED
970	471221731	471221732
1170	471222731	471222732
1370	471223731	471222733

All measurements are in mm.

# Pallet transfer trolleys

## Pallet transfer trolleys

Suitable for transport of pallets between two or more conveyor lines.

One of several applications is to deliver empty pallets from a single pallet magazine to several pallet loaders and to collect full pallets and transfer these for onward central conveying.

The transfer trolley can be fitted with:

- Driven roller conveyors.
- Chain conveyors.
- Rotary table with roller or chain conveyor.
- 90° angled transfer unit.

The standard transfer trolley has safety bumpers. On contact, the transfer trolley stops. The transfer trolley runs on rails fitted into or on the floor.

### Specifications

**Standard width:** 970 mm, 1170 mm, and 1370 mm.

**Standard length:** 1500 mm.

**Minimum operating height:**

With roller conveyor:

350 mm.

With chain conveyor:

450 mm.

Other heights on request.

**Payload:** Max. 1500 kg.

**Speed:** Standard 10 m/min.

Other speeds available on request.

**Gear motor:** 2 units each of 0.25 kW.

**In connection with an order, please send the following information to SOCO SYSTEM:**

- Products to be transferred
- Pallet sizes and direction of movement
- Pallet load height
- Desired operating height – minimum and standard is 350 mm
- Distance of trolley movement
- Required capacity in number of pallet transfers per hour
- Preferred method of power supply "overhead rail" or floor mounted "energy chain"
- Preferred method of floor rail – "built in" or "rails on floor"
- Preferred method of personnel protection

## Pallet exchangers

The pallet exchanger consists of 2 side modules which are bolted to the floor.

The pallet fingers on the modules hold the pallet at approximately 240 mm above the floor.

No pneumatic air or electricity is required.

Pallet exchangers can be used for all pallet sizes.

**Payload:** Max. 500 kg.

**Capacity:** 15 pallets.

### Pallet exchangers

ADJUSTABLE FOR ALL PALLET SIZES

ITEM NO. 477270000

*By changing the distance between the two side modules, the pallet exchanger is easily adapted for the actual pallet size. The modules are then bolted to the floor.*

### Simple and quick pallet change at the packing station

With the pallet exchanger, the exchange of pallets at the packing station becomes a rational operation. There is no more need for unpractical and time consuming stops and no need for space to put pallets into waiting position.

### Easy and safe pallet stacking

The pallet stacker makes stacking of pallets a simple and safe operation. Empty pallets are inserted from below and lifted. This gives tall and straight pallet stacks that can be removed in one move.

*Transfer trolley installed in a pallet roller conveyor system supplied to Organon, Ireland.*

# Pallet magazines

## PalManager A versatile pallet magazine

Pallets can be stacked/  
destacked individually or as  
stacks.

The magazine can be  
operated manually or  
function automatically.

Using photocells and  
built-in automatic control  
system, the PalManager  
determines if stacking or  
destacking is required.  
The PalManager is used either  
as a single module or as an  
integrated part of a system.

**PALMANAGER MULTI  
FOR 14 PALLETS**

Width for Multi Versions:  
Pallet width 800 = 1190 mm  
Pallet width 1000 = 1390 mm  
Pallet width 1200 = 1590 mm Other dimensions, see table

**PALMANAGER 4Way MULTI  
FOR 14 PALLETS**

<b>PALMANAGER 4Way FOR 24/24/20 PALLETS</b>						
455200101	PalManager 4Way 800	1200 X 800	24	1000	Compressed air 6-10 bar, 16 l/ cycle, power supply: 1 X 230 volt	1675 X 1190 X 3550
455200102	PalManager 4Way 1000	1200 X 1000	24	1000	Compressed air 6-10 bar, 16 l/ cycle, power supply: 1 X 230 volt	1675 X 1390 X 3550
455200103	PalManager 4Way 1200	1200 X 1200	20	1000	Compressed air 6-10 bar, 16 l/ cycle, power supply: 1 X 230 volt	1675 X 1590 X 3550

The PalManager is available in two models:

### PalManager

Pallets to/from floor and conveyor systems.

### PalManager 4Way

Pallets to/from conveyor systems in all 4 directions.

The Multi versions for 14 pallets have an adjustable rear section for different pallet widths.

*PalManager 4Way. The PalManager is easy to integrate into fully automatic lines.*

*This Multi version stacks/destacks the pallets from pallet roller conveyors of heights as low as 90 mm. Here shown with 2-parted infeed/outfeed conveyor.*

## Pallet magazine for heavy-duty use

This model is used where heavy-duty palletising systems are required.

The pallet magazine can be filled by forklift with stacks or single pallets.

The magazine can handle different sizes of pallets. Change-over time less than one minute.

### Specifications

**Payload:** Max. 500 kg.

**Operating height:**  
Min. 235 mm.

**Air and power supply:**  
Compressed air 6-10 bar,  
8 l/cycle, power supply:  
1 x 230 volt.

Can also be supplied with separate electrical control cabinet.

*Pallet magazine at Dansk Kaffe Kompagni in Copenhagen.*

**In connection with an order, please send the following information to H+D**

- Pallets to be handled (type and size).
- "In" and "out" direction of movement.

- Method of replenishment – by forklift or pallet stacker.
- Required operating height (minimum 235 mm with forklift and minimum 350mm with pallet stacker).

Clear electrical diagrams detail the programme setup.

Full system layout is provided with each installation.

Customised control panels with touch screen features for easy man/machine interaction.

Photocell monitoring.

Well organised control cabinets with space for expansion.

## Control systems

SOCO SYSTEM supplies customised control systems for end-of-line packing and handling systems.

Our control systems are based on PLC programme platforms such as Siemens, Omron, Allen – Bradley. Customer specifications and customer choice of control systems and electrical components can be met.

## Palletising equipment

Systems including palletising robots are supplied as standard with an IPC equipped with a Soft-PLC. This supports in full the IEC 1131 standard.

Overall operating system platform and man/machine interface is Windows based.

The IPC controlling the palletising robot can also control virtually all peripheral equipment. Production data can be provided for overall control systems. Programmes can be changed through modem access, and error messages can be sent by e-mail or SMS.

## Operator interface

SOCO SYSTEM's user interfaces are designed to facilitate the operation of the system, with well-defined error messages to ensure simple trouble-shooting procedures.

It can be designed for different levels of access to ensure maximum machine security and personnel safety.

Operator interface systems are a very important feature in the smooth operation of integrated end-of-line systems. SOCO SYSTEM has proven experience in developing efficient operator interfaces.

Contact our project department for further information

## Safety guidelines

SOCO SYSTEM modules are manufactured to meet CE requirements and specifications.

Each module is secured individually in the best possible way. Combinations of modules, however, may require further safety and security measures to prevent accidents and to increase personnel safety.

SOCO SYSTEM offers an individual safety and personnel security evaluation as well as recommend solution. Such solutions can include fencing, light curtains, automatic gates, safety curtains, and doors operated and controlled automatically. This ensures that the complete installation meets the requirements in the EEC directives.

The solutions offered are tailor-made to meet your specific requirements and to suit your premises.

SOCO SYSTEM integrates the most recent industrial security systems from reputable European suppliers.

SOCO SYSTEM equipment meets the following EC directives:

73/23 EEC – 89/336 EEC  
– 98/37 EC

and thereby also the following harmonised standards:

EN 291-X – EN 418 – EN 954  
– EN 959 – EN 999 – EN 1050  
– EN 60204-1.

*Customised fencing for pallet conveyor line with integrated fully automatic pallet stretch wrapper.*

*Automatic light curtain protection preventing entry to the danger zone but allowing exit of a full pallet.*

## General specifications

### Electrical specifications

SOCO SYSTEM equipment meets the electrical specification requirements of EC and the USA. Please request electrical specification details for further information.

### Materials

SOCO SYSTEM equipment is manufactured in first class steel plates.

### Surface treatment

SOCO SYSTEM products are supplied in electro galvanised steel or powder coated in standard colours.

Other colours are available on request.

Where special surfaces of steel plates or specific requirements for access to cleaning are requested these can be supplied – ask for information.

### Stainless steel

Stainless steel versions are available on request. SOCO SYSTEM can supply different types of stainless steel versions depending on requirement.

### Environment

SOCO SYSTEM pallet handling equipment is designed for use:

- In rooms with temperatures ranging from +5°C to +45°C.
- In rooms with a relative humidity of no more than 50% at 40°C or 90% at 20°C.

For cold store use in rooms from +5°C to -35°C, SOCO SYSTEM can supply standard equipment in special versions – please ask for further information.

For use in aggressive environment, SOCO SYSTEM can supply standard equipment in special versions – please ask for further information.

### Safety

Pallet roller conveyors with RP 178 mm with operating height below 600 mm and chain conveyors need to be fenced to meet EC regulations for personnel safety. Pallet roller conveyors with RP 89 mm with any operating height does not need to be fenced (See page 29).

## Pallet roller conveyors

**Frames:** Cold-bend angle profiles bolted to C-profile cross bars.

### Surface treatment

Electro galvanized steel with the exception of gear motor, chain, and roller axles. Rollers have increased wear properties and are electro galvanized with yellow chromating.

### Rollers

Ø 80 mm electro galvanized steel tubes.

### Axle diameter

Ø 17 mm.

### Bearings

6203 – 2RS.

### Roller fittings

Rollers suspended between side frames by means of Ø 17 mm axle.

### Payload

Max. 1500 kg per conveyor and per gear motor.

### Standard height

Height from floor to top of rollers from 90 mm.

### Chain drive for rollers

Chains operate beneath roller surface. Chain drive is from roller to roller. 1/2" sprockets are integrated with the bearing of the roller. The sprockets are made of hardened steel to ensure increased wear properties. The bearing unit is fixed to

the roller by 4 subsurface pressure points.

### Chain cover

Chains are protected by a U-profile mounted above the chains. The chain cover is beneath roller height to ensure access to pallets from both sides of the conveyor.

### Gear motor

0.37 kW. Worm reduction gear fixed to conveyor frame.

### Speed

11.4 m/min (other speeds available).

### Roller pitch

RP – the distance between the roller centres.

*Rollers are equipped with through-going 17 mm steel axles fitted at both ends into 6203 2RS steel ball bearings, lubricated for life. Chains from roller to roller ensure a smooth and efficient transmission of power. Stainless steel bearings are available on request.*

## Chain conveyors

### Chains

3/4" pallet chain with straight side plates.

### Payload

Max. 1500 kg per conveyor and per motor.

### Standard height

Total height from floor to top of chain from 225 mm.

### Gear motor

0.55 kW. Worm reduction gear fixed to conveyor frame.

### Cover plates

Cover plates can be supplied to protect the interior of the chain conveyor. Often used to prevent dirt from entering and to improve visual appearance.

### Surface treatment

Electro galvanized steel with the exception of gear motor, chain, and axles.

### Speed

11.4 m/min:  
1500 kg (with one gear).
